

Data management
software, but better

**Intuitive, secure
geological data
management
software**

Save time and effort, reduce errors and risk, and increase your confidence in your data with 1 point.

At Flout, we understand that your geological data is not just an asset: it's the lifeblood of your business. That's why we've built 1 point, the ultimate geological data management software solution designed to make capturing, managing and delivering your data anywhere, anytime **effortless, secure, and efficient.**

Why 1 point?

1 point is intuitive, multi-commodity, secure, cloud-based geological data management software to capture, manage and deliver your data anywhere, anytime.

Security

Never worry about losing your most valuable asset.

Your data is safe with 1 point. Our cloud-based data management system encrypts and backs up your data right here in Australia by Azure services, some of the most secure servers in the world.

Accuracy

Be secure in the knowledge your data has been processed correctly.

Effortlessly track and view every change with full version history in 1 point, reliably accessing audit trails and more for each data set. Plus, with live logging and direct input, you'll save time, reduce errors and risk, and increase your confidence in your data.

Availability

Your data will always be accessible and ready whenever you need it.

1 point keeps you on top of a mountain of data and ensures it's always at your fingertips, intelligently storing and centralising your data, allowing you to capture, visualise and report with ease. 1 point will help you make decisions quickly and confidently.

Here's how 1point will transform your business:

1. Cut time & boost efficiency

Reduce rework

1point helps you not only save time but also achieve significant cost savings, ensuring every operation is streamlined for maximum efficiency.

Seamless data integrity

Using the latest SQL technology, 1point ensures your data is stored and tracked with full integrity. You'll enjoy features including version history, change tracking, and redundancy across Microsoft Azure servers.

Manage data status effortlessly

Not only is 1point flexible and scalable, you can manage your data effortlessly across different phases – raw, validated, corrected, sampled, and more – all tailored to your project and your team.

2. Automate tedious tasks

Data uploading, made easy

1point automatically uploads your data from 1pointDesktop, saving data entry time, reducing human error and ensuring the integrity of your data from field to office.

Flexible data handling

1point can take data in any form – from .csv to spreadsheets or other formats – it takes only minutes to set up your tables, then you can sit back and let 1point do all the hard work uploading your data.

Custom Tables

Format your data exactly as you need it with 1point, every time, with custom tables and other options to ensure your data is always available in the format that best suits you and your team.

3. Reduce errors with smart data validation

Spot errors fast

1point puts all uploaded data through an automatic validation process, flagging inconsistencies instantly, enabling you to make corrections quickly and easily.

Enhanced core photo management

With 1point, you can name and tag core photos consistently with their drillhole locations and depths, allowing you to visualise them next to your data.

LAS data precision

With 1point, LAS data headers can be edited to ensure they are correctly ascribed to the appropriate drillhole and depth, allowing fast, accurate corrections.

4. Collaborate & manage projects with ease

One platform for all your projects

1 point allows you to manage multiple projects from a single login while keeping data separated and secure. Plus, you have full control over who can view, read, or write to your data.

Secure collaboration

With two-factor authentication and role-based access control, 1 point ensures only authorised users can view or handle your data. Your team can message, tag and alert others to the progress on a hole or project via 1 point's in-built Messageboard.

Flexible access control

You can invite contributors from inside and outside your organisation to your projects directly from 1 point, allowing access to specific projects. 1 point is scalable and flexible, handling as many users as you require with no additional "per user" charges.

5. Edit & visualise your data effortlessly

Streamlined management

1 point ensures you are using accurate data to produce models and make decisions thanks to inbuilt, easy-to-use and familiar spreadsheet filtering and editing tools to view and manage your data.

Map feature

The *Map Feature* in 1 point allows you to view your drillhole locations and attach all relevant data to each – from drilling reports and core photos, to LAS data and more – to create a comprehensive overview of your project.

The 1 point Advantage

With a small investment of time and money, **1 point delivers unparalleled value to your business**, securing your multi-million dollar investment in data collection.

With 1 point, you're not just getting a data management tool ... you're getting a comprehensive solution that **saves your business time, enhances data integrity, and empowers you to make smarter decisions, faster.**
